SUMMARY

Recent BCA graduate with a foundation in cybersecurity through the Google Cybersecurity Professional Certificate and hands-on lab projects covering incident response, network analysis, compliance auditing, and Python automation. Looking to start my career as a SOC analyst or junior security role.

SKILLS

Security	Incident Response · Log Analysis · IOC Identification · Alert Triage · SIEM Concepts
Network	Wireshark · tcpdump · PCAP Analysis · Firewall Rules · Network Traffic Analysis
Compliance	NIST CSF · NIST SP 800-30 · PCI DSS · GDPR · SOC 1/SOC 2 · MITRE ATT&CK
Code	Python · SQL · Bash
Systems	Linux (Ubuntu, Kali) · Windows · File Permissions · Access Control

EDUCATION

Bachelor of Computer Applications (BCA) · Tulas Institute, Dehradun

CERTIFICATIONS

Google Cybersecurity Professional Certificate — Google · Coursera
Cybersecurity Certificate — RCPL Centre of Excellence · Tulas Institute

PROJECTS

Incident Handler's Journal

Simulated Lab · Incident Response · SIEM · Forensics

- Triaged a simulated credential stuffing alert via SIEM correlation. Identified 3 attacker IPs, isolated the affected server, and achieved containment in under 20 minutes.
- Documented forensic evidence (memory dump, disk image, 72 hrs of logs) and produced a remediation report covering MFA, WAF updates, and threat hunting steps.

Botium Toys — Internal Security Audit

Simulated GRC Audit · PCI DSS · GDPR · NIST CSF

- Assessed controls and compliance for a simulated retail business. Found 9 gaps including no IDS, unencrypted cardholder data, and no disaster recovery plan — Risk Score 8/10.
- Produced a compliance report mapping findings to PCI DSS, GDPR, and SOC 1/2, with 8 prioritised recommendations.

Vulnerability Assessment — MySQL Server

Simulated Assessment · NIST SP 800-30 · Risk Scoring

- Scored 3 risk scenarios on a simulated Linux MySQL server using NIST SP 800-30. Hacker exfiltration rated 9/9 CRITICAL. Recommended RBAC, MFA, and TLS — reducing risk from 9 to 3.

Network Analysis Portfolio

Lab Environment · Wireshark · tcpdump · VirusTotal

- Analysed PCAP files in Wireshark, captured live traffic with tcpdump, confirmed a malicious file hash via VirusTotal (70+ AV engines), and completed a ransomware IR kill-chain analysis.
