SUMMARY

Cybersecurity analyst with hands-on project experience in incident response, network traffic analysis, Linux access control, SQL security investigations, GRC compliance auditing (NIST CSF, PCI DSS, GDPR), and Python automation. Google Cybersecurity Professional Certificate holder with a foundation built through structured SOC-level lab work.

SKILLS

Security	Incident Response · Alert Triage · IOC Identification · SIEM · Log Analysis · Forensic Collection · MITRE ATT&CK
Network	Wireshark · tcpdump · PCAP Analysis · Network Traffic Analysis · DDoS/ICMP · Firewall Rules
Compliance	NIST CSF · NIST SP 800-30 · PCI DSS · GDPR · SOC 1/SOC 2 · Risk Assessment · Controls Auditing
Programming	Python · SQL/MySQL · Bash
Tools	VirusTotal · SHA-256 Hash Analysis · IDS/IPS
Systems	Linux (Ubuntu, Kali) · chmod · File Permissions · Access Control · Windows

EDUCATION

Bachelor of Computer Applications (BCA) · Tulas Institute, Dehradun

CERTIFICATIONS

Google Cybersecurity Professional Certificate — Google · Coursera

Cybersecurity Certificate — RCPL Centre of Excellence · Tulas Institute

PROJECTS

Incident Handler's Journal

Incident Response, SIEM, IOC Analysis, Forensics — Simulated Lab

- Triaged a simulated credential stuffing alert via SIEM correlation. Identified 3 attacker IPs as IOCs, disabled the compromised account, and isolated the affected server — containment achieved in under 20 minutes.
- Preserved forensic evidence (memory dump, disk image, 72 hours of PCAP and IDS logs) and produced a 7-step remediation report covering MFA rollout, WAF hardening, and threat hunting.

Botium Toys — Internal Security Audit

GRC, PCI DSS, GDPR, SOC 1/2, NIST CSF — Simulated Audit

- Completed a full controls and compliance audit for a simulated retail business — Risk Score 8/10 HIGH. Identified 9 critical gaps including no IDS, unencrypted cardholder data, and no disaster recovery plan.
- Mapped findings to PCI DSS, GDPR, and SOC 1/2 requirements. Delivered 8 prioritised remediation recommendations.

Vulnerability Assessment — MySQL Server

NIST SP 800-30, Risk Scoring, Database Security — Simulated Assessment

- Assessed a simulated Linux MySQL server under NIST SP 800-30 Rev. 1. Scored hacker exfiltration at 9/9 CRITICAL. Recommended RBAC, MFA, TLS upgrade, and IP allow-listing — reducing critical risk score from 9 to 3.

Network Analysis Portfolio

Wireshark, tcpdump, VirusTotal, PCAP Analysis — Lab Environment

- Analysed PCAP files in Wireshark, performed live tcpdump capture, confirmed a malicious file hash via VirusTotal across 70+ AV engines, and completed a ransomware IR kill-chain analysis.
