SUMMARY

BCA graduate with hands-on project experience across incident response, network traffic analysis, Linux access control hardening, SQL-based security investigations, GRC compliance auditing (NIST CSF, PCI DSS, GDPR), and Python automation. Google Cybersecurity Professional Certificate holder. Building practical skills on TryHackMe and Hack The Box; pursuing CompTIA Security+.

SKILLS

Security	Incident Response · IDS/SIEM · IOC Analysis · Threat Detection · Log Analysis · Forensic Collection · Chain of Custody
Network	Wireshark · tcpdump · PCAP Analysis · Network Traffic Analysis · DDoS/ICMP · Firewall Rules · Source IP Verification
Compliance	NIST CSF · NIST SP 800-30 · PCI DSS · GDPR · SOC 1/SOC 2 · Risk Assessment · Controls Auditing
Programming	Python · SQL/MySQL · Bash · File I/O Automation
Systems	Linux (Ubuntu, Kali) · chmod · Access Control · Least Privilege · Windows
Learning	TryHackMe · Hack The Box · CompTIA Security+ (In Progress)

EDUCATION

Bachelor of Computer Applications (BCA) · Tulas Institute, Dehradun

CERTIFICATIONS

Google Cybersecurity Professional Certificate — Google · Coursera

Cybersecurity Certificate — RCPL Centre of Excellence · Tulas Institute

PROJECTS

Incident Handler's Journal

Incident Response · SIEM · Forensics

- Detected and contained a credential stuffing breach in under 20 minutes — identified 3 attacker IPs as IOCs via SIEM correlation, disabled the compromised account, and isolated the production server to halt lateral movement.
- Preserved forensic evidence (memory dump, disk image, PCAP logs) and delivered a 7-step remediation plan: MFA rollout, WAF hardening, password policy upgrade, and structured threat hunting.

Botium Toys — Internal Security Audit

GRC · PCI DSS · GDPR · SOC 1/2 · NIST CSF

- Completed a full controls and compliance audit — Risk Score 8/10 HIGH. Uncovered 9 critical gaps including absent IDS, unencrypted cardholder data (PCI DSS violation), no DRP, and no Separation of Duties.
- Delivered 8 prioritised remediation recommendations: IDS deployment, full encryption, Least Privilege enforcement, DRP implementation, and formal asset classification.

Vulnerability Assessment — MySQL Server

NIST SP 800-30 · Risk Assessment

- Scored 3 threat scenarios under NIST SP 800-30 Rev. 1 — hacker exfiltration rated 9/9 CRITICAL. Recommended RBAC, MFA, TLS upgrade, and IP allow-listing, reducing projected critical risk from 9 to 3.

Network Analysis Portfolio

Wireshark · tcpdump · VirusTotal · Ransomware IR

- Analysed PCAP captures using Wireshark, performed live tcpdump packet capture, confirmed a malicious file hash via VirusTotal (70+ AV engines), and conducted a ransomware IR kill-chain analysis using 5W methodology.
