PROFESSIONAL STATEMENT

BCA graduate with a strong interest in network defence and information security. I have built practical skills across the full security operations lifecycle — from threat detection and incident response through compliance auditing, access control hardening, and automation. I am committed to continuous learning and to helping organisations protect their systems from evolving cyber threats.

EDUCATION

Bachelor of Computer Applications (BCA) · Tulas Institute, Dehradun

3-Year Programme · Uttarakhand, India

- Core modules: Networking, Database Management, Software Development, Information Systems, Linux, and Python.

CERTIFICATIONS

Google Cybersecurity Professional Certificate

Google · Coursera

- Comprehensive programme covering security fundamentals, risk management, network security, Linux and SQL, Python automation, asset and threat management, and detection and response.

Verify: coursera.org/verify/JDVGWIRFVB7C

Cybersecurity Certificate

RCPL Centre of Excellence · Tulas Institute, Dehradun

- Intensive programme covering core cybersecurity principles. Delivered by RCPL India — an EC-Council Accredited Training Centre and Microsoft Certified Partner.

TECHNICAL SKILLS

Security Ops	Incident Response · IDS/SIEM Alert Analysis · IOC Identification · Threat Detection · Log Analysis · Forensic Collection · Chain of Custody
Network	Wireshark · tcpdump · PCAP Analysis · Network Traffic Analysis · DDoS/ICMP Flood · Firewall Rules · Source IP Verification
Compliance	NIST CSF · NIST SP 800-30 Rev. 1 · PCI DSS · GDPR · SOC 1/SOC 2 · Risk Assessment · Controls Auditing
Programming	Python (File I/O, Automation) · SQL/MySQL (AND/OR/NOT/LIKE/WHERE) · Bash
Tools	VirusTotal · SHA-256 Hash Analysis · IDS/IPS · SIEM Correlation
Systems	Linux (Ubuntu, Kali Linux) · chmod · File Permissions · Access Control · Least Privilege · Windows
Learning	TryHackMe — Blue Team & SOC Path · Hack The Box · CompTIA Security+ (In Progress)

PROJECTS

Incident Handler's Journal

Incident Response · SIEM · IOC Analysis · Forensics

- Detected and contained a HIGH severity credential stuffing breach in under 20 minutes — identified 3 attacker IPs as IOCs via SIEM correlation, disabled the compromised account, and isolated the production server to prevent lateral movement.

- Collected and preserved forensic evidence: memory dump, full disk image, PCAP data, and 72 hours of access and IDS logs. Delivered a 7-step remediation plan covering MFA rollout, WAF hardening, password policy upgrade, and structured threat hunting.

Botium Toys — Internal Security Audit

GRC · PCI DSS · GDPR · SOC 1/2 · NIST CSF

- Completed a full internal controls and compliance assessment for a retail business. Risk Score: 8/10 HIGH. Identified 9 critical gaps: no Least Privilege, no IDS, no DRP, no backups, and cardholder data stored unencrypted (direct PCI DSS violation).
- **PCI DSS:** Non-compliant across all 4 assessed areas — all employees could access cardholder data, card data unencrypted, no password management controls in place.
- **GDPR:** EU customer financial data unencrypted; assets not formally classified. 72-hour breach notification plan exists.
- **SOC 1/2:** No Least Privilege or Separation of Duties — PII/SPII accessible without role-based restriction.
- Delivered 8 prioritised remediation recommendations including IDS deployment, full encryption, DRP implementation, and formal asset classification.

Vulnerability Assessment — MySQL Server

NIST SP 800-30 · Risk Scoring · Database Security

- Assessed a Linux MySQL server hosting marketing and analytics data under NIST SP 800-30 Rev. 1. Scored 3 threat scenarios (Likelihood × Severity).
- **Hacker Exfiltration — 9/9 CRITICAL:** Likelihood 3 (unrestricted access) × Severity 3 (full customer and analytics data at risk).
- **Employee Disruption — 6/9 HIGH:** Likelihood 2 (no internal access controls) × Severity 3 (mission-critical operations).
- **Customer Tampering — 3/9 MEDIUM:** Likelihood 1 × Severity 3 (data integrity risk).
- Recommended: RBAC, MFA, TLS upgrade (replacing deprecated SSL), and IP allow-listing to corporate offices. Projected risk reduction: 9 → 3, 6 → 2, 3 → 1.

DDoS Incident Report Analysis

NIST CSF · Network Security · Incident Response

- Analysed a high-volume ICMP flood DDoS (spoofed source IPs) that took all network services offline. Root cause: no rate-limiting or source IP verification in place.
- Applied all 5 NIST CSF functions: Protect (firewall rate-limiting, IDS/IPS), Detect (traffic monitoring, source IP verification), Respond (staged isolation), Recover (critical services first). Produced a structured incident report and updated the IR playbook.

Network Analysis Portfolio

Wireshark · tcpdump · VirusTotal · Ransomware IR

- **Ransomware IR:** 5W kill-chain analysis for a healthcare organisation attack — phishing → credential compromise → encryption. Documented full IR lifecycle from detection through recovery.
- **Wireshark PCAP Analysis:** Inspected capture files, examined protocol headers and TCP/UDP sessions, applied display filters to isolate malicious traffic and extract IOCs.
- **tcpdump Live Capture:** Captured and filtered live network traffic from the Linux CLI; developed real-time traffic analysis skills.
- **VirusTotal SHA-256:** Submitted suspicious file hash from an IDS alert — confirmed malicious across 70+ AV engines. Standard Tier 1 SOC triage workflow.

SQL Filters & Python Automation

Python · SQL/MySQL · File I/O · Access Control

- Wrote 6 targeted SQL security queries (AND/OR/NOT/LIKE) across login and employee tables to support active after-hours login investigations and access scope reviews.
- Built a Python file I/O algorithm automating IP allow-list maintenance: reads allow_list.txt, iterates a remove_list with conditional .remove() to prevent errors, then rewrites the file. Idempotent and schedulable.

ADDITIONAL TRAINING

TryHackMe — Blue Team & SOC Analyst Path · In Progress

Hack The Box — Practical penetration testing and enumeration labs · In Progress
